

Dr. Bonnie Price is the Chair of the Veterinary Health Science and Technology Department within the School of Allied Health Sciences at Lincoln Memorial University in Harrogate TN. Before training in veterinary public health, she completed her undergraduate work in anthropology and participated in primate fieldwork and conservation studies throughout Central America and West Africa, which fostered a strong commitment to culturally competent and multidisciplinary approaches to improve health and wellness at the interface of animals, humans and the environment.

Dr. Price's teaching is focused on One Health and includes courses such as Zoonotic Disease, Wildlife Disease, and The Human Animal Bond. She lectures for undergraduates across multiple disciplines (including pre-med, pre-vet, nursing, and conservation biology) with the goal of creating interdisciplinary collaborations very early in students' training. She is also active in mentoring student leadership groups on campus. In addition to her work with undergraduates, she lectures on food safety for the LMU College of Veterinary Medicine.

Dr. Price earned her Doctor of Veterinary Medicine (D.V.M.) and Master of Public Health (M.P.H.) degrees from the University of Tennessee Knoxville.
